

SQA Intern Assignment

Objective

The purpose of this assignment is to evaluate practical Software Quality Assurance (SQA) skills, including testing capability, analytical thinking, bug identification, documentation quality, and overall product quality evaluation.

Auto Background Remover App file: [APK Download Link](#)

Figma UI Link: [UI Link](#)

Testing Scope

The testing scope will focus on the following Homepage features:

1. **Background Remove**
2. **Batch Remover**

Candidates are required to test the complete workflow, functionalities, options, and user experience related to these two modules.

Important Note

The application uses a third-party API-based background removal service. Therefore, the evaluation should not focus on the perfection of AI background removal results. Instead, focus on the application's functionality, workflow, stability, usability, performance, and overall product quality.

Required Submission

Candidates must submit the following:

1. Bug Report
 - Bug Title
 - Steps to Reproduce
 - Expected Result
 - Actual Result
 - Severity
 - Screenshot/Screen Record
2. Test Cases
3. Suggestions / Improvements

Evaluation Criteria

Candidates will be evaluated based on:

- Depth and quality of testing
- Attention to detail
- Bug identification capability
- Documentation and reporting quality
- Analytical thinking and product understanding

Submission Format

Accepted formats:

- Google Docs
- Excel/Spreadsheet
- PDF
- Word Document

Screenshots and screen recordings are appreciated where applicable.
